Dear Bob

Beer Closures

Please find enclosed Beer Closures with LCP (liquid crystal polymer) barrier discs – 0.002" thick. These discs have not been insert moulded but are retained by the ODS seal. Once the seal has collapsed, the discs are held firmly in place.

These can be shown to Heineken however, note the tamper evident problem has not been rectified. Insert moulded samples, where the disc is moulded in to the closure, so that it becomes an integral component, will be available early next week. Please advise how many samples will be required by Heineken for testing.

Note that LCP barrier properties are in excess x 20 greater than EVOH so that a scavenger is not required.

Please advise should additional information be required.

Regards

PP Julie Keyte
